

A sample page from: Tables of Houses, Placidus System

by the Rosicrucian Fellowship

Note the unique layout, by degrees north (or south) of the equator, then by sidereal time. Find your sidereal time, read off the house cusps. What would the chart look like if birth were four minutes earlier (or later)? Look at the line above or below. How much do you need to tweak the chart to get that moon out of the third & into the second, where you think it should be? The reason, I think, why more people don't rectify charts is that other house tables work against it, due to their poor organization. Also on this particular page (the last in the book), note how houses are distorted by extreme latitude north (or south) of the equator.
