

AstroAmerica's Daily Ephemeris for Midnight, GMT

This page, July 2010, is common to all three books (2000-2010, 2010-2020, 2000-2020). All three books include daily latitudes, true node, daily declinations, complete aspectarian, void-of-course Moon, lunar sign ingresses, lunations (with eclipses shown at the top of the page). Monthly: Julian Day, Ayanamsa, SVP & the mean node. Chiron's longitude is given every three days, its declination monthly, as well as its stations & ingresses. In the Introductory are instructions for using the Ayanamsa to convert from Tropical to Sidereal Zodiacs, and further instructions in calculating Nakshatras, as aides to Vedic astrologers.

On this page, Uranus & Jupiter turn retrograde in Aries, Saturn & Mars enter Libra, there is a solar eclipse. Gentle reader, what do you think may happen during this time?
