

B.V. Raman's 110 Year Ephemeris of Planetary Positions, 1891-2000, revised & enlarged edition of 1992

Planetary positions, Sun through Saturn, and Rahu, given every ten days, in 360 degree notation, one year per page. Positions are TROPICAL, not sidereal. Subtract your Ayanamsa & you have the proper sidereal position. Note the Ayanamsa for the first day of the year. It does not match the Ayanamsas given in other reference books and is presumably Raman's own. What is given is approximately one & one half degrees less than Lahiri. Lunar positions are given every two days. For other details, see the [blurb](#).
